10 February 1987

MEMORANDUM FOR: Chief, Polygraph Division, OS

FROM:

Chief, New Building Project Office, OL

SUBJECT: Polygraph Space

1. Pursuant to our discussion on 4 February 1987, I am providing the following information in response to two specific issues you raised:

a. The polygraph files are currently planned to occupy 2310 square feet of space on the ground floor of the New Headquarters Building. These files are co-located with those maintained by the Security Records Division. A dumbwaiter is being installed to allow transport of files directly to the Security Registry on the fourth floor.

b. Adequate heating, ventilation, and air conditioning (HVAC) is available to serve interview rooms proposed for the fourth floor. Some modifications would have to be made to local HVAC registers and variable air volume boxes. These changes would be made concurrently with the architectural changes required to configure the area as interview rooms.

2. Please contact me on [redacted] should you require any further information.
